Answers For Student Exploration Photosynthesis Lab Gizmo Answers for Student Exploration Photosynthesis Lab Gizmo This document provides answers for the Student Exploration Photosynthesis Lab Gizmo a virtual laboratory simulation designed to help students understand the process of photosynthesis The Gizmo allows students to manipulate variables and observe their effects on plant growth providing a hands-on learning experience without the constraints of a real lab setting

**Section 1**

1 What is the purpose of photosynthesis Photosynthesis is the process by which plants algae and some bacteria use sunlight water and carbon dioxide to create their own food glucose and oxygen as a byproduct This glucose provides energy for the plants growth and other life processes

2 Where does photosynthesis take place in a plant cell Photosynthesis occurs in the chloroplasts specifically within the thylakoid membranes

3 What are the inputs reactants of photosynthesis The inputs of photosynthesis are sunlight water  $H_2O$  and carbon dioxide  $CO_2$

4 What are the outputs products of photosynthesis The outputs of photosynthesis are glucose  $C_6H_{12}O_6$  and oxygen  $O_2$

**Section 2 Experiment 1**

1 Choose the Light Intensity tab What happens to the amount of oxygen produced as you increase the light intensity As the light intensity increases the amount of oxygen produced also increases This is because light energy is essential for driving the reactions of photosynthesis and more light provides more energy for the process

2 Choose the Carbon Dioxide Concentration tab What happens to the amount of oxygen produced as you increase the concentration of carbon dioxide Increasing the carbon dioxide concentration also leads to an increase in oxygen production This is because carbon dioxide is a key reactant in photosynthesis and higher concentrations allow the plant to perform the process more efficiently

3 Choose the Temperature tab What happens to the amount of oxygen produced as you increase the temperature Initially increasing the temperature leads to an increase in oxygen production However after a certain point the rate of oxygen production starts to decline This is because the enzymes involved in photosynthesis have optimal temperature ranges Beyond that range the enzymes become less efficient and the process slows down

**Section 3 Analysis**

1 Which factor light intensity carbon dioxide concentration or temperature had the greatest effect on the rate of photosynthesis This answer will vary depending on the specific settings used in the Gizmo However generally light intensity tends to have the greatest impact on the rate of photosynthesis

2 How can you tell the rate of photosynthesis from the graph The rate of photosynthesis is determined by the slope of the line on the graph A steeper slope indicates a faster rate of oxygen production which corresponds to a higher rate of photosynthesis

3 Explain how the amount of carbon dioxide used affects the rate of photosynthesis Carbon dioxide is a key reactant in photosynthesis It combines with water to form glucose the energy source for the plant As the concentration of carbon dioxide increases the plant has more of this reactant available which leads to a faster rate of photosynthesis and more glucose production

4 What is the relationship between the amount of light energy and the rate of photosynthesis The amount of light energy directly affects the rate of photosynthesis Light energy is used to drive the reactions of photosynthesis and as the light intensity increases there is more energy available to fuel the process This leads to a faster rate of photosynthesis

5 Explain how the temperature affects the rate of photosynthesis 3 Temperature influences the rate of photosynthesis by affecting the activity of the enzymes involved in the process Enzymes have optimal temperature ranges for their activity As the temperature increases within that range the enzymes work more efficiently and the rate of photosynthesis increases However beyond that range the enzymes become less efficient and the rate of photosynthesis declines
