coordination chemistry is the study of compounds formed between metal ions and other neutral or negatively charged molecules this book offers a series of investigative inorganic laboratories approached through systematic coordination chemistry it not only highlights the key fundamental components of the coordination chemistry field it also exemplifies the historical development of concepts in the field in order to graduate as a chemistry major that fills the requirements of the american chemical society a student needs to take a laboratory course in inorganic chemistry most professors who teach and inorganic chemistry laboratory prefer to emphasize coordination chemistry rather than attempting to cover all aspects of inorganic chemistry because it keeps the students focused on a cohesive part of inorganic chemistry which has applications in medicine the environment molecular biology organic synthesis and inorganic materials

this full color manual is designed to satisfy the content needs of either a one or two semester introduction to physical science course populated by nonmajors it provides students with the opportunity to explore and make sense of the world around them to develop their skills and knowledge and to learn to think like scientists the

material is written in an accessible way providing clearly written procedures a wide variety of exercises from which instructors can choose and real world examples that keep the content engaging exploring physical science in the laboratory guides students through the mysteries of the observable world and helps them develop a clear understanding of challenging concepts

the experiments in this manual are designed in a discovery format and the majority require only small quantities of reagents

this established manual focuses on using non hazardous materials to teach the experimental nature of general chemistry experiments are written to address students of various academic backgrounds and differing interests and abilities in chemistry while most experiments can be conducted in a single three hour period some have been designed to be completed over an extended time to illustrate that chemical systems do not work at an arbitrary schedule suggestions are provided for combining experiments of shorter length and similar pedagogy

this work offers a comprehensive introductory treatment of the organic laboratory techniques for handling glassware and equipment safety in the laboratory micro and mini scale experimental procedures theory of reactions and techniques applications and spectroscopy

green chemistry involves designing novel ways to create and synthesize products and implement processes that will eliminate or greatly reduce negative environmental impacts providing educational laboratory materials that challenge students with the customary topics found in a general chemistry laboratory manual this lab manual enables students to see how green chemistry principles can be applied to real world issues following a consistent format each lab experiment includes objectives prelab questions and detailed step by step procedures for

performing the experiments additional questions encourage further research about how green chemistry principles compare with traditional more hazardous experimental methods

this laboratory manual is designed to accompany the texts fundamentals of general organic and biological chemistry 2nd edition and elements of general and biological chemistry 6th edition by john r holum it is also appropriate for any one year course treating a survey of chemistry at this level and for one term courses covering the whole spectrum of any part of it the experiments have been used by students and have been frequently revised following student polls regarding clarity and interest and suggestions from instructors the questions on the report and observation sheets have again been adjusted in the light of student comments and more room for answers has been provided on many report sheets
