why is it that some countries comply with international laws while others disregard them courts codes and custom argues that the degree to which states accept and comply with international legal norms is rooted in a country s domestic legal tradition offering a novel cultural institutional theory to explain this variation dana zartner looks specifically at state policy towards international human rights and environmental law a

state s legal tradition the cultural and institutional factors that shape attitudes about the law appropriate standards of behavior and the legal process is the key mechanism by which international law becomes recognized accepted and internalized in the domestic legal framework legal tradition shapes not only perceptions about law but also provides the lens through which policy makers view state interests providing both direct and indirect influence on state policy in the book zartner disaggregates the concept of legal tradition and examines how the individual cultural and institutional characteristics present within a state s domestic legal tradition facilitate or hinder the internalization of international law and subsequently shape state policy this provides explanation for both the differences in international law recognition across legal traditions as well as the variance among states within legal traditions to test this theory she presents a series of comparative case studies these studies fall under five of the main legal traditions in the world today common law u s and australia civil law germany and turkey islamic law egypt and saudi arabia mixed traditions india and kenya and east asian law china and japan zartner addresses a number of different themes including the differences among legal traditions as well as between states within the same tradition the important role that legal culture and history play in shaping contemporary attitudes about law and similarities and differences in state policy towards human rights law versus environmental law

rum is a theory of applicative side effect free computations over an algebraic data structure it goes beyond a theory of functions computed by programs treating both intensional and extensional aspects of computation powerful programming tools such as streams object oriented programming escape mechanisms and co routines can be represented intensional properties include the number of multiplications executed the number of context switches and the maximum stack depth required in a computation extensional properties include notions of equality for streams and co routines and characterization of functionals implementing strategies for searching tree structured spaces precise definitions of informal concepts such as stream and co routine are given and their mathematical theory is developed operations on programs treated include program transformations which introduce functional and control abstractions a compiling morphism that provides a representation of control abstractions as functional abstractions and operations that transform intensional properties to extensional properties the goal is not only to account for programming practice in lisp but also to improve practice by providing mathematical tools for developing programs and building programming systems rum views computation as

a process of generating computation structures trees for context independent computations and sequences for context dependent computations the recursion theorem gives a fixed point function that computes computationally minimal fixed points the context insensitivity theorem says that context dependent computations are uniformly parameterized by the calling context and that computations in which context dependence is localized can be treated like context independent computations
