this book investigates machine learning ml one of the most fruitful fields of current research both in the proposal of new techniques and theoretic algorithms and in their application to real life problems provided by publisher

this book explores new alternative metaheuristic developments that have proved to be effective in their application to several complex problems though most of the new metaheuristic algorithms considered offer promising results they are nevertheless still in their infancy to grow and attain their full potential new metaheuristic methods must be

applied in a great variety of problems and contexts so that they not only perform well in their reported sets of optimization problems but also in new complex formulations the only way to accomplish this is to disseminate these methods in various technical areas as optimization tools in general once a scientist engineer or practitioner recognizes a problem as a particular instance of a more generic class he she can select one of several metaheuristic algorithms that guarantee an expected optimization performance unfortunately the set of options are concentrated on algorithms whose popularity and high proliferation outstrip those of the new developments this structure is important because the authors recognize this methodology as the best way to help researchers lecturers engineers and practitioners solve their own optimization problems

this book systematically introduces readers to the core algorithms of battery management system bms for electric vehicles these algorithms cover most of the technical bottlenecks encountered in bms applications including battery system modeling state of charge soc and state of health soh estimation state of power sop estimation remaining useful life rul prediction heating at low temperature and optimization of charging the book not only presents these algorithms but also discusses their background as well as related experimental and hardware developments the concise figures and program codes provided make the calculation process easy to follow and apply while the results obtained are presented in a comparative way allowing readers to intuitively grasp the characteristics of different algorithms given its scope the book is intended for researchers senior undergraduate and graduate students as well as engineers in the fields of electric vehicles and energy storage

the subjects of green energy and sustainability have never been more important as governments around the world wrestle with the problem of how to protect the planet from the damage being caused to the environment by climate change this book presents the proceedings of geesd2023 the 4th international conference on green energy environment and sustainable development held in mianyang china from 15 17 june 2023 and online via zoom the conference aims to gather innovative academicians and industry experts in the fields of green energy environment and sustainable development in a common forum providing a platform for the exchange of the latest research developments in related fields this year the call for papers attracted more than 280 submissions 138 of which were accepted for inclusion in this collection the process of evaluation and peer review took place over six months and involved more than 100 tpc members and reviewers the book is divided into 7 sections green energy and systems computer methods in the environment chemistry and the environment ecology and the rural environment energy environment and economy environment and pollution and water and mineral resources papers deal with the most up to date findings and technologies the book provides a valuable overview of the latest research and developments and will be of interest to all those working in the fields of green energy and sustainable development
