the mesozoic era begins with the approximately 50 million year long triassic period a major juncture in earth history when the vast pangaean supercontinent completed its assembly and began its fragmentation and the global biota diversified and modern ized after the end permian mass extinction the most extensive biotic decimation of the phanerozoic the temporal ordering of geological and biotic events during triassic time thus is critical to the interpretation of some unique and pivotal events in earth his tory this temporal ordering is mostly based on the triassic time scale which has been developed and refined for nearly two centu ries this book reviews the state of the art of the triassic timescale and includes comprehensive analyses of triassic radio isotopic ages magnetostratigraphy isotope based and cyclostratigraphic correlations and timescale relevant marine and non marine bio stratigraphy

over the past five years there have been many advances in the field of basin analysis developments such as the publication of new stratigraphic codes new research in fission track dating evolution of thought regarding the importance of tectonic versus eustatic controls of regional and global cycles and refinements of geophysically based basin subsidence models have necessitated the publication of a second edition of principles of sedimentary basin analysis like the first edition this book emphasizes the stratigraphic evidence which geologists can actually see in outcrops well records and core samples and can gather using geophysical techniques principles of sedimentary basin analysis is both an excellent text for students and a practical handbook for professional geologists

the key to earth history an introduction to stratigraphy peter doyle matthew r bennett and alistair n baxter school of earth sciences university of greenwich uk the key to earth history is the first textbook on stratigraphy to introduce the student to the basic tools used by geologists to reconstruct earth s history as well as showing how these can be utilised to chart the pattern of global environmental change which has taken place since the formation of the earth some 4600 million years ago divided into two sections the book discusses how stratigraphy is the key to understanding the history of the earth and how it can be used as a dynamic tool in unravelling ancient earth environments the first part examines the basic stratigraphical methods used to establish date and interpret sequences of rocks as the products of a series of events in the earth s history the second part of the book presents the results obtained by geologists who have used these stratigraphical tools in order to build up a record of the way in which the earth s global environment has changed through geological time the reader is introduced to these concepts through the use of boxes highlighting key points together with international case histories and this user friendly approach will ensure that the key to earth history is essential first year reading for geology environmental science and geography undergraduates
