over the last decade market based incentives have become the regulatory tool of choice
when trying to solve difficult environmental problems evidence of their dominance can be
seen in recent proposals for addressing global warming through an emissions trading
scheme in the kyoto protocol and for amending the clean air act to add a new emissions
trading systems for smog precursors and mercury the bush administration s clear skies
program they are widely viewed as more efficient than traditional command and control
regulation this collection of essays takes a critical look at this question and evaluates
whether the promises of market based regulation have been fulfilled contributors put forth
the ideas that few regulatory instruments are actually purely market based or purely
prescriptive and that both approaches can be systematically undermined by insufficiently
careful design and by failures of monitoring and enforcement all in all the essays
recommend future research that no longer pits one kind of approach against the other but
instead examines their interaction and compatibility this book should appeal to academics
in environmental economics and law along with policymakers in government agencies and
advocates in non governmental organizations
